One 1000 Genomes person:
variants in the panel gene regions
(1000 Genomes AF below 1%, grpmax below 1%,
ClinVar P/LP removed)
gnomAD v3.1.2 frequency,
with the person and their family left out
Keep grpmax AF below 0.1%
Add one ClinVar P/LP diagnostic
(genotype set by the gene's mode;
full gnomAD grpmax below 0.1%,
exempt from the frequency filter)
Inheritance filter:
keep genotypes the gene's mode allows
Rank every variant in the list
by each score
Outcome: rank of the diagnostic
(top 1 if nothing scores as high)
