50 new people, no overlap, no relatives
500 replication cases
10 per person
First run's 50 people
200 SNV cases
4 per person
Models fitted on all 200
and locked
120 indel cases
ranked among indels
5-fold cross-validation,
grouped by person
(descriptive)
Locked models applied
unchanged to the 500
Reading rule, fixed in advance
Gain that matters: interval above 0
and estimate at least 5 points
and key secondary points the same way
No gain that matters: interval inside -5 to +5
Otherwise: inconclusive
